

## **IN THE CLAIMS**

Claim 1 has been amended as follows:

1. (Currently Amended) A computerized method, comprising the steps of:  
generating, at a managed object which is part of a monitored network, ~~an~~ a  
completed event report when a set of event detection criteria is  
satisfied;  
marking said completed event report with an identifier if a set of conditions is  
satisfied;  
sending said completed event report from said managed object to a first  
database;  
checking at said first database if said completed event report comprises said  
identifier; and  
forwarding said completed event report to a second database and storing said  
completed event report on said second database only if said completed  
event report comprises said identifier.

Claim 2 has been amended as follows:

2. (Currently Amended) The computerized method of claim 1, comprising  
employing a set of conditions that is a subset of said set of event detection criteria as  
said set of conditions which must be satisfied for marking said report with said  
completed event identified identifier.

Claim 3 has been amended as follows:

3. (Currently Amended) The computerized method of claim 1 comprising:  
monitoring said monitored network with an agent-manager network  
management system; and

configuring an agent which resides on said managed object to generate and send said completed event report to a manager which resides at a Network Management Station which comprises said first database.

4. (Original) The computerized method of claim 1, comprising providing a medial device as said managed object.

Claim 5 has been amended as follows:

5. (Currently Amended) The computerized method of claim 4, comprising employing a set of conditions related to components of said medical device as said set of conditions which must be satisfied for marking said completed event report with said ~~identified~~ identifier.

Claim 6 has been amended as follows:

6. (Currently Amended) A networked system comprising:  
a first database;  
a managed object;  
a second database connected to said first database;  
said managed object being configured to:  
generate an a completed event report when a set of event detection criteria is satisfied;  
mark said completed event report with an identifier if a set of conditions is satisfied;  
send said completed event report to said first database;  
said first database being configured to:  
receive said completed event report;  
check if said completed event report comprises said identifier; and

forward said completed event report to said second database only if said completed event report comprises said identifier.

7. (Original) The system of claim 6, wherein said set of conditions is a subset of said set of event detection criteria.

Claim 8 has been amended as follows:

8. (Currently Amended) The system of claim 6, wherein:  
said network is monitored with an agent-manager network management system;  
an agent which resides on said managed object generates and sends said completed event report to a manager; and  
said manager resides on a Network Management Station which comprises said first database.

9. (Original) The system of claim 6, wherein said managed object is a medical device.

10. (Original) The system of claim 9, wherein said set of conditions is related to components of said medical device.

Claim 11 has been amended as follows:

11. (Currently Amended) A computerized method, comprising the steps of:  
receiving, at a first database which is connected to a network that includes a managed object, an a completed event report due to a change in the status of said managed object;  
checking at said first database if said completed event report comprises an identifier; and

forwarding said completed event report to a second database and storing said completed event report on said second database only if said completed event report comprises said identifier.

Claim 12 has been amended as follows:

12. (Currently Amended) The computerized method of claim 11, comprising generating said completed event report at said managed object when a set of event detection criteria is satisfied.

Claim 13 has been amended as follows:

13. (Currently Amended) The computerized method of claim 11, comprising marking said completed event report, at said managed object with said identifier if a set of conditions is satisfied.

Claim 14 has been amended as follows:

14. (Currently Amended) The computerized method of claim 13, employing a set of conditions that is a subset of said set of event detection criteria as said set of conditions which must be satisfied for marking said completed event report with said ~~identified~~ identifier.

Claim 15 has been amended as follows:

15. (Currently Amended) The computerized method of claim 11, comprising:

monitoring said network with an agent-manager network management system;

configuring an agent which resides on said managed object to generate and send said completed event report to a manager which resides at a Network Management Station which comprises said first database.

16. (Original) The computerized method of claim 11, comprising employing a medical device as said managed object.

Claim 17 has been amended as follows:

17. (Currently Amended) The computerized method of claim 16, comprising generating said event report at said managed object when a set of completed event detection criteria is satisfied.

Claim 18 has been amended as follows:

18. (Currently Amended) The computerized method of claim 16, comprising marking said completed event report at said managed object ~~report~~ with said identifier if a set of conditions is satisfied.

Claim 19 has been amended as follows:

19. (Currently Amended) The computerized method of claim 18, comprising employing set of conditions that is a subset of said set of event detection criteria as said set of conditions which must be satisfied for marking said completed event report with said ~~identified~~ identifier.

Claim 20 has been amended as follows:

20. (Currently Amended) The computerized method of claim 18, comprising employing a set of conditions related to components of said medical device as said set of conditions which must be satisfied for marking said completed event report with said ~~identified~~ identifier.
